Saltwater and Marine Atmospheres

MBCI® warrants that its panels exposed to normal atmospheric conditions, will perform to the terms, conditions and/or limitations specific to the applicable Signature 200®, Signature 300®, or Galvalume® warranties issued for such panels. MBCI does not guarantee the performance of panels subject to corrosive conditions including, saltwater/marine environments.

While a minimum safe distance from these conditions that is acceptable in all situations cannot be established, MBCI does provide general guidelines for installations near these areas.

Signature 200® & Signature 300® finishes:

- 1,000 feet from any body of saltwater

Galvalume® finishes:

- 1,500 feet from coastline with surf
- 800 feet from coastline of large saltwater bay
- 400 feet from saltwater marshes or canals

Please be advised it is impossible to anticipate each and every condition under which the MBCI panels may be exposed to salt spray, saltwater or marine atmospheres. Therefore, the general guidelines described above may vary based on project or location specific conditions.
